Gazely

Intelligence for live presentation.

BRAND IDENTITY SYSTEM / V1.0 / SEPTEMBER 2026

The idea

Gazely is built around attention: software that pays attention to what is happening live, understands the context, and helps bring the right content into view.

Attention -> Understanding -> Presentation

The upper form represents the live moment: speech, context and what is happening in the room. The lower form represents what Gazely brings into view. The negative space between them represents the intelligence layer connecting the two.

Logo system

Gazely

PRIMARY MARK

Use the full-colour primary mark on Porcelain or white. On dark surfaces, the upper form and wordmark reverse to white while Signal Lime remains unchanged.

Clear space & minimum size

Clear space

Maintain clear space around the symbol equal to roughly one quarter of the symbol width. No type, partner logo or edge should enter this zone.

Minimum sizes

Symbol: 16 px digital minimum. Primary horizontal lockup: 96 px wide digital minimum. At very small sizes use the symbol only.

Colour

Gazely Black
#111310

Porcelain
#F3F1EA

Signal Lime
#B8F34A

Stone
#6B6F68

Signal Lime is a semantic accent: recognition, ready state, active intelligence and positive confirmation. It should feel precise, not decorative. Most Gazely surfaces should remain black, porcelain and neutral.

Typography

Intelligence that pays attention.

Gazely listens. Gazely understands. Gazely presents.

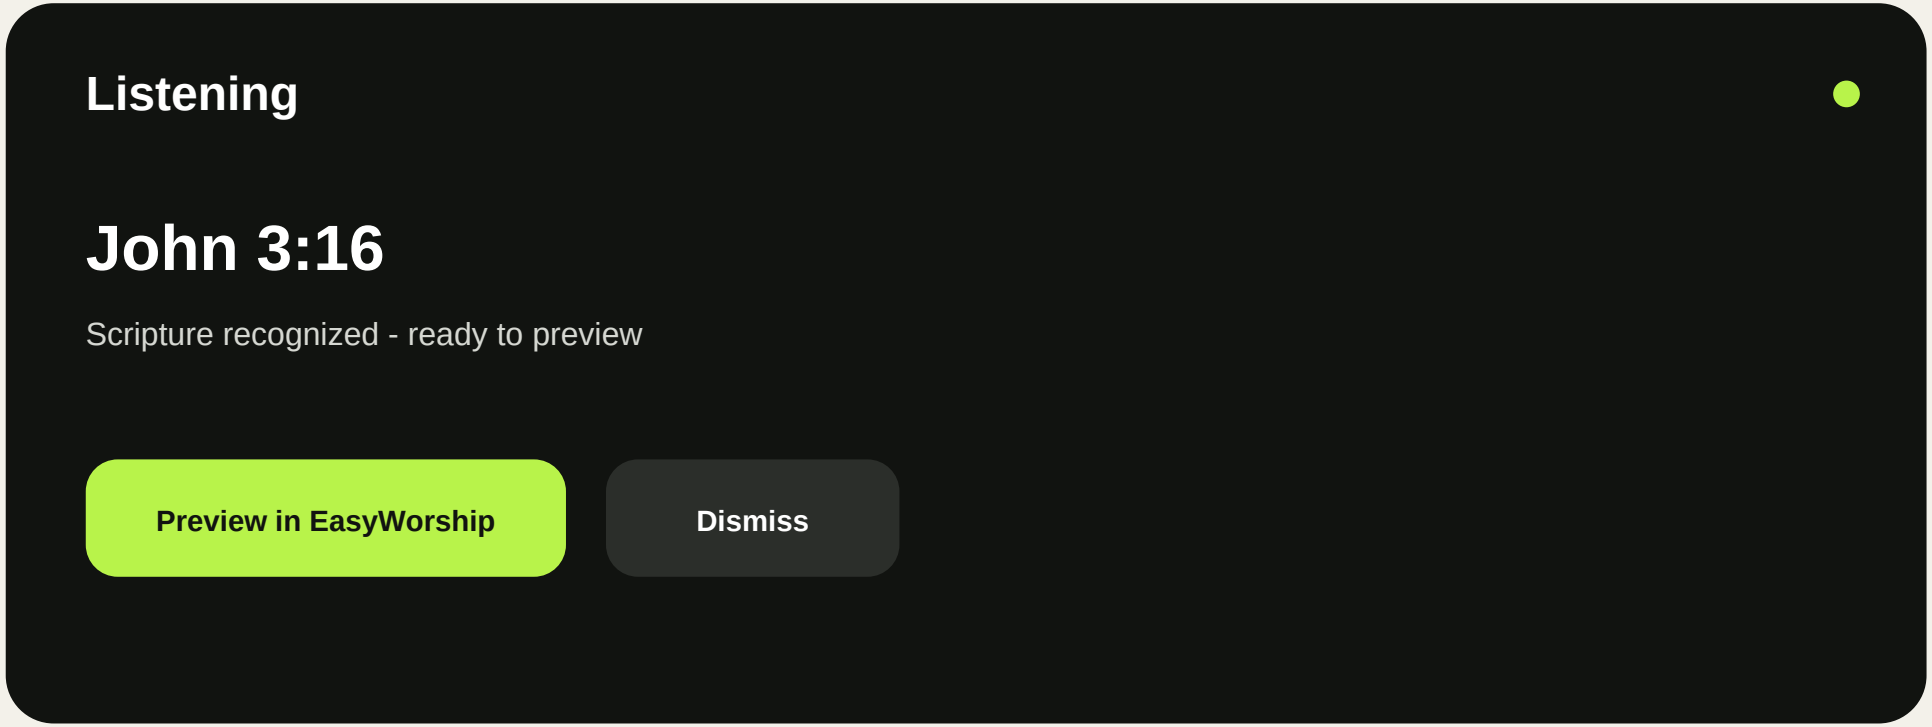
Recommended family: Geist Sans or Inter for product and communications. Use 600-700 for headlines, 400-500 for body copy, and restrained tracking for labels. Avoid aggressively futuristic typefaces.

Graphic language

Quiet structure. Generous negative space. Thin rules. Cropped forms derived from the symbol. Signal Lime appears only when something has been noticed, recognized or made ready.

Avoid literal eyes, microphones, Bibles, crosses, projectors, robots, circuit brains, lightning bolts and generic AI sparkles.

Product design foundation



Product states must never rely on colour alone. Pair colour with text/iconography. Human operator actions take priority. Motion should feel like focus and reveal, not a chatbot pulse.

Brand architecture

Gazely

Master/public identity

Gazely Presenter	Product descriptor when context requires it
Gazely for EasyWorship	Integration naming
Gazely for ProPresenter	Integration naming
Gazely for FreeShow	Integration naming

Messaging

Primary descriptor

Intelligence for live presentation.

Brand explanation

Gazely is coined around 'gaze': attention, awareness and what comes into view. It represents software that pays attention to a live moment and helps surface the right content at the right time.

Expressive line

Gazely pays attention. So you can stay present.

Product one-liner

AI-powered intelligence that listens to live presentation context and prepares the right content for the screen.

Imagery & motion

Photography

Real live-production environments. Directional stage light. Projection booths. Operator silhouettes. Screens and subtle haze. Cinematic, but believable.

Motion

Focus, then reveal. Listening is calm. Recognition tightens focus. Signal Lime appears once. Content enters with a restrained fade/translate. Respect reduced-motion preferences.

Gazely

Gazely pays attention. So you can stay present.
